TC52

Dual Channel Voltage Detector

Features

- Two Independent Voltage Detectors in One Package
- Highly Accurate: ±2%
- Low Power Consumption: 2.0µA, Typ.
- Detect Voltage Range: 1.5V to 5.0V
- Operating Voltage: 1.5V to 10.0V
- Output Configuration: N-Channel Open-Drain
- Space-Saving 5-Pin SOT-23A Package

Typical Applications

- Battery Life Monitors and Recharge Voltage Monitors
- Memory Battery Backup Circuitry
- Power-On Reset Circuits
- Power Failure Detection
- Delay Circuitry

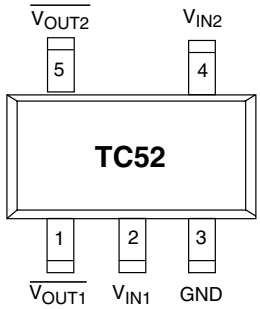
Package Type

5-Pin SOT-23A



General Description

The TC52 consists of two independent low power voltage detectors in a space-saving 5-pin SOT-23A package. Typical supply current consumption is only 2µA at an input voltage of 2V. The voltage detection threshold settings are factory-programmed and guaranteed to ±2% accuracy. Threshold settings over a range of 1.5V to 5.0V are available. The TC52 is available with open drain (NMOS) configurations. Small size, high precision, low supply current, and low installed cost makes the TC52 the ideal voltage detector for a wide variety of voltage monitoring applications.

2.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in Table 2-1.

TABLE 2-1: PIN FUNCTION TABLE

Pin No. (5-Pin SOT-23A)	Symbol	Description
1	V_{OUT1}	Detector #1 output.
2	V_{IN}	Supply voltage input, detect voltage 1.
3	GND	Ground terminal.
4	V_{IN2}	Detect voltage 2.
5	V_{OUT2}	Detector #2 output.

3.0 DETAILED DESCRIPTION

In normal steady-state operation and for either channel, when $V_{IN} > V_{DET}-$, the output is high, see Figure 3-1. (In the case of the TC52N, this is an open-drain condition.) If and when the input falls below $V_{DET}-$, the output pulls down (Logic 0) to V_{SS}. Generally, V_{OUT} can pull down to within 0.5V of V_{SS} at rated output current and input voltages. (Also see Section 1.0, Electrical Characteristics).

The output, V_{OUT}, stays valid until the input voltage falls below the minimum operating voltage, V_{INMIN}, of 0.7V. Below this minimum operating voltage, the output is undefined. During power-up or anytime V_{IN} has fallen below V_{INMIN}, V_{OUT} will remain undefined until V_{IN} rises above V_{INMIN}, at which time the output becomes valid. V_{OUT} is maintained in its active low state while $V_{INMIN} < V_{IN} < V_{DET}+$. ($V_{DET}+ = V_{DET}- + V_{HYST}$). If and when the input rises above $V_{DET}+$, the output will assume its inactive state (open-drain for TC52N).

4.0 APPLICATIONS INFORMATION

Pin 2 (V_{IN1}) acts as both the input to Voltage Detector #1, as well as the power supply input for the chip. As such, always assign V_{IN1} to monitor voltages between 1.5V and 10V. Failure to do this will result in unreliable detector operation due to an out-of-tolerance supply voltage. In high noise environments, it may be necessary to install a small input bypass capacitor (0.01µF to 0.1µF) from V_{IN1} to ground to minimize on-chip power supply noise.

4.1 Battery and Main Supply Monitor

The circuit shown in Figure 4-1 provides both a processor supply monitor/reset function, as well as a low battery detect function. As shown, the TC52N3330ECT (N-Channel outputs) uses Detector 2 to monitor the system power supply rail. When the power supply is 10% below its nominal output voltage rating, the V_{OUT2} output is driven and held low. When the power supply voltage is above 3.0V nominal, V_{OUT2} is driven to an open circuit and the combination of R_1 and C_1 provides a reset time out delay. Detector 1 monitors the voltage on the main supply battery. A low battery condition is indicated when the battery voltage falls to 3.3V, at which time the main processor is interrupted to initiate a warning or system shutdown.

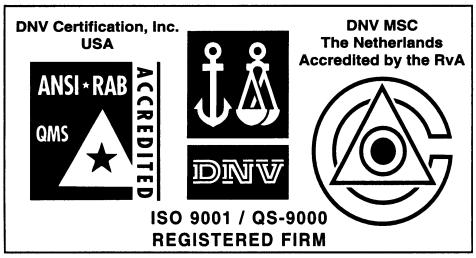
NOTES:



Microchip received QS-9000 quality system certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona in July 1999 and Mountain View, California in March 2002. The Company's quality system processes and procedures are QS-9000 compliant for its PICmicro® 8-bit MCUs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, non-volatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001 certified.
