

**54AC11245, 74AC11245
OCTAL BUS TRANSCEIVERS
WITH 3-STATE OUTPUTS**

SCAS010A - JULY 1987 - REVISED APRIL 1993

- 3-State Outputs Drive Bus Lines Directly
- Flow-Through Architecture Optimizes PCB Layout
- Center-Pin V_{CC} and GND Configurations Minimize High-Speed Switching Noise
- **EPIC™** (Enhanced-Performance Implanted CMOS) 1-μm Process
- 500-mA Typical Latch-Up Immunity at 125°C
- Package Options Include Plastic Small-Outline Packages, Plastic Shrink Small-Outline Packages, Plastic Thin Shrink Small-Outline Packages, Ceramic Chip Carriers, and Standard Plastic and Ceramic 300-mil DIPs

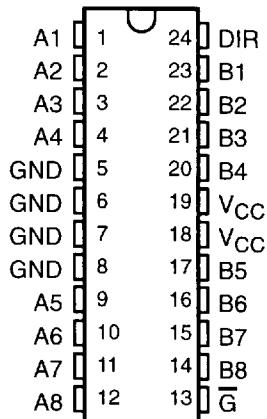

description

These octal bus transceivers are designed for asynchronous two-way communication between data buses. The control function implementation minimizes external timing requirements.

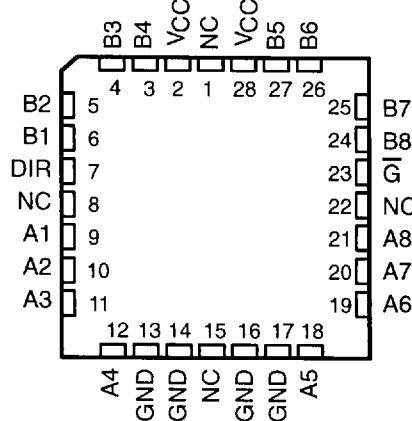

The devices allow data transmission from the A bus to the B bus, or from the B bus to the A bus, depending upon the logic level at the direction control (DIR) input. The enable input (\bar{G}) can be used to disable the device so that the buses are effectively isolated.

The 54AC11245 is characterized for operation over the full military temperature range of -55°C to 125°C . The 74AC11245 is characterized for operation from -40°C to 85°C .

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V_{CC}			-0.5 V to 7 V
Input voltage range, V_I (see Note 1)			-0.5 V to $V_{CC} + 0.5$ V
Output voltage range, V_O (see Note 1)			-0.5 V to $V_{CC} + 0.5$ V
Input clamp current, I_{IK} ($V_I < 0$ or $V_I > V_{CC}$)			±20 mA
Output clamp current, I_{OK} ($V_O < 0$ or $V_O > V_{CC}$)			±50 mA
Continuous output current, I_O ($V_O = 0$ to V_{CC})			±50 mA
Continuous current through V_{CC} or GND			±200 mA
Storage temperature range			-65°C to 150°C

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

PARAMETER MEASUREMENT INFORMATION

NOTES: A. C_L includes probe and jig capacitance.

B. All input pulses are supplied by generators having the following characteristics: PRR $\leq 10 \text{ MHz}$, $Z_O = 50 \Omega$, $t_r = 3 \text{ ns}$, $t_f = 3 \text{ ns}$.

C. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.

D. The outputs are measured one at a time with one input transition per measurement.
