# High Performance 1024x4 PROM TiW PROM Family

# 53/63S440 53/63S441 53/63S441A

3

## Features/Benefits

- 35-ns maximum access time
- Reliable titanium-tungsten fuses (TiW) guarantee greater than 98% programming yields
- Low-voltage generic programming
- PNP inputs for low input current
- Open collector or three-state outputs

## Applications

- Microprogram control stores
- Microprocessor program store
- Look-up table
- Character generator
- Code converter
- Programmable logic element (PLE™) 10 inputs, 4 outputs, 1024 product terms

## Description

The 53/63S440 and 53/63S441/A are 1024x4 bipolar PROMs featuring low input current PNP inputs, full Schottky clamping with open collector or three-state outputs. The titanium-tungsten fuses store a logical low and are programmed to the high-state. Special on-chip circuitry and extra fuses provide preprogramming testing which assures high programming yields and high reliability.

The 63 series is specified for operation over the commercial temperature and voltage range. The 53 series is specified for the military ranges.

## Programming

The 53/63S440 and 53/63S441/A PROMs are programmed with the same programming algorithm as all other Monolithic Memories' generic TiW PROMs. For details contact the factory.
