HIGH PRECISION VOLTAGE DETECTORS

The S-809 Series is a high-precision voltage detector developed using a CMOS process. The detection voltage is fixed internally, with an accuracy of $\pm 2.0\%$. Attachment of an external capacitor can delay the release signal.

S-809 Series

HIGH PRECISION VOLTAGE REGULATORS

The S-812 Series is a three-terminal positive voltage regulator made using the CMOS process. Since this has higher precision output voltage and consumes less current than existing three-terminal voltage regulators, battery-powered portable equipment can have a higher performance and a longer service life.

S-812 Series

The S-813 Series is a three-terminal positive voltage regulator made using a CMOS process. The output voltage is fixed internally.

This series has a higher accuracy of output voltage (+/- 2.4%) and needs a smaller input/output voltage ($V_{df}=0.12V$ when I_{OUT} is 40mA) than the S-812 series, so battery-powered portable equipment can have a higher capacity and a longer service life.

S-813 Series
