**Dip 14-8 Case**

- **SAW Frequency Stabilization**
- **Fundamental-Mode Oscillation at 400.0 MHz**
- **0.8" x 0.5" x 0.25" Metal Dip Case**

This general-purpose oscillator is stabilized by surface-acoustic-wave (SAW) technology. Fundamental oscillation at 400.0 MHz eliminates all internally generated spurious outputs except integral harmonics of 400.0 MHz. The compact size of the rugged, metal, hermetically-sealed case makes this oscillator suitable for a variety of applications.

**Notes:**

1. One or more of the following United States patents apply: 4,616,197; 4,610,681; and 4,761,616.
2. Unless noted otherwise, all specifications are listed at  $T_A = +25^\circ\text{C} \pm 2^\circ\text{C}$ ,  $V_{CC} =$  nominal voltage  $\pm 0.01$  VDC, and load impedance =  $50 \Omega$  with VSWR  $\leq 1.5:1$ .
3. The design, manufacturing process, and specifications of this device are subject to change without notice.
4. Applies to oscillator only and not to sidebands caused by external electrical or mechanical sources. (Dedicated external voltage regulation with low-frequency filtering for the DC power supply and proper circuit board layout are recommended for optimum spectral purity.)
5. For specified maximum operating load VSWR (any angle) at  $F_o$ . (No instability or damage will occur for any passive load impedance.)
6. For any combination of  $V_{CC}$  and  $T_A$  within the specified operating ranges.
7. Applies for any combination of Note 5 and 6 conditions.
