## SAMSUNG POWER SWITCH

The SPS product family is specially designed for an off line SMPS with minimal external component. The SPS consist of high voltage Power SenseFET and current mode control IC. Included control IC features a tr-trimmed oscillator, under voltage lock out, leading edge blanking, optimized gate driver, and temperature compensated current sources. Also included are various protective functions, thermal shutdown, Over-voltage protection, Overcurrent protection, and overload protection. Compared with RCC or control IC and MOSFET solution, SPS can reduce total number of components, design size, weight. For this reason SPS can increase efficiency, productivity and system reliability. It has a basic platform well suited for cost effective C-TV power supply.

### FEATURES

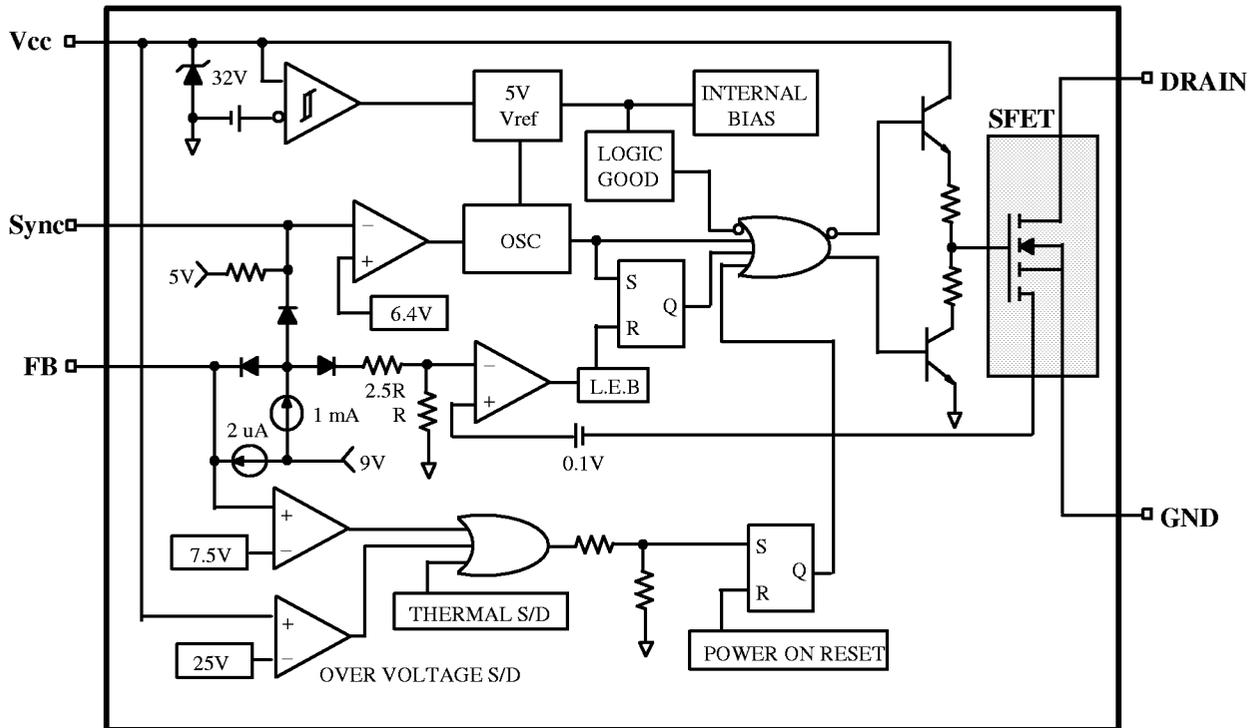

- Wide operating frequency range up to 150KHz
- Pulse by pulse over current limiting
- Over load protection
- Over voltage protection (min:23V)
- Internal thermal shutdown function
- Under voltage lockout
- Internal high voltage sense FET
- External sync terminal
- Auto Restart Mode
