

Descriptions

This series of fixed-voltage monolithic integrated-circuit voltage regulators is designed for a wide range of applications. These applications include on-card regulation for elimination of Noise and distribution problems associated with single-point regulation. In addition, they can be used with power-pass elements to make high-current voltage regulators. Each of these regulators can deliver up to 100mA of output current. The internal limiting and thermal shutdown features of these regulators make them essentially immune to overload. When used as a replacement for a Zener diode-resistor combination, an effective improvement in output impedance can be obtained together with lower-bias current.

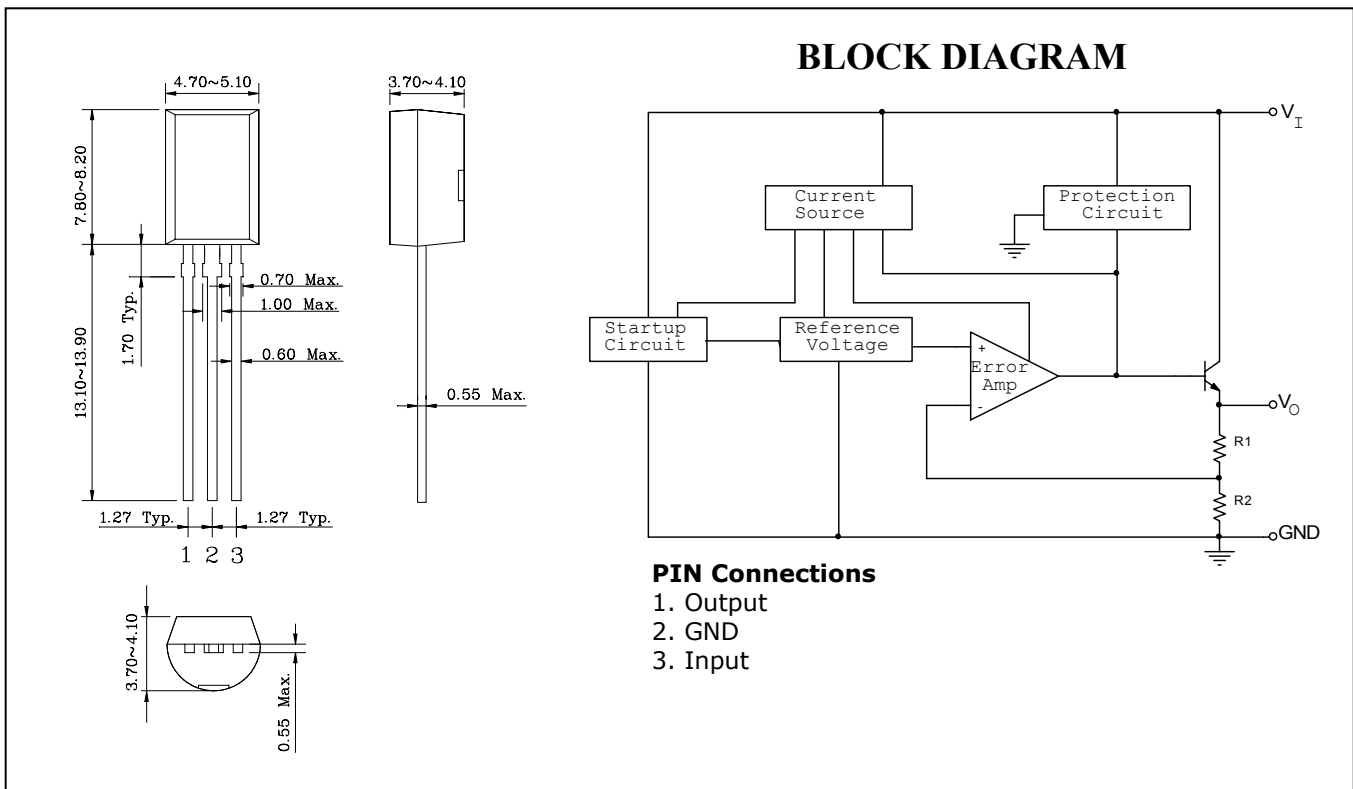

Features

- 3-Terminal Regulators
- Output Current of 100mA
- Thermal Shutdown Protection
- Short-Circuit Limit Protection

Ordering Information

Type NO.	Marking	Package Code
S78LxxL	S78L□□L	TO-92L
□□: Voltage Code (05:5V, 06:6V, 08:8V, 09:9V, 10:10V, 12:12V, 15:15V, 18:18V, 24:24V)		

Outline Dimensions (Unit : mm)

Absolute maximum ratings

[Ta=25°C]

Characteristics	Symbol	Rating	Unit
Input Voltage	V _I	S78L05L Thru S78L10L	30
		S78L12L Thru S78L18L	35
		S78L24L	40

* Pulse testing techniques are used to maintain the junction temperature as close to the ambient temperature as possible.

Thermal effects must be taken into account separately. All characteristics are measured with a $0.33 \mu F$ capacitor across the input and a $0.1 \mu F$ capacitor across the output.

** This specification applies only for dc power dissipation permitted by absolute maximum ratings.
