

Low Drop Regulator with Signal Interface Logic Circuit

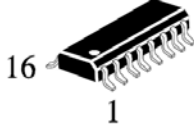

IK3101

DESCRIPTION

The IC is linear voltage regulator 5V with low dropout voltage typically 100mV at light loads and less then 500mV at full loads, with better then 4% output voltage accuracy. In additional IC have logical blokes for additional functions.

FEATURES

- Voltage regulator 5V with 4% output voltage accuracy
- Low dropout voltage 0.7V Max
- Load current 200mA Max
- Low Standby Current Consumption : 500 μ A
- Logical blokes for internal back light control
- Over Voltage & Over Temperature Protection
- Short Current Protection
- 60V Load Dump Protection
