

Description

The ACE432 is a low voltage three terminal adjustable shunt regulator with a guaranteed thermal stability over applicable temperature ranges. The output voltage can be set to any value between V_{REF} (approximately 1.24V) to 8V with two external resistors.

The device has a typical output impedance of 0.30Ω. Active output circuitry provides a very sharp turn on characteristic, making this device excellent replacement for Zener diodes in many applications.

The ACE432 is characterized for operation from 0°C to 105°C, and two package options (SOT-23-3 and TO-92) allow the designer the opportunity to select the proper package for their applications.

Features

- Low voltage operation (1.24V)
- Adjustable output voltage $V_D = V_{REF}$ to 8V
- Wide operating current range 60μA to 100mA
- Low dynamic output impedance 0.30Ω (Typ.)
- Trimmed bandgap design up ±0.5%
- ESD rating is 2.5KV (Per MIL-STD-883D)

Application

- Linear Regulators
- Adjustable Supplies
- Switching Power Supplies
- Battery Operated Computers
- Instrumentation
- Computer Disk Drives

BM	230	3.50	543	435	326

Note:

1. Exceeding the maximum allowable power dissipation will result in excessive die temperature, and the regulator will go into Thermal shutdown.

2. T_J : Junction Temperature Calculation $T_J = T_A + (P_D \times \theta_{JA})$

The θ_{JA} numbers are guidelines for the thermal performance of the device/PC-board system. All of the above assume no Ambient airflow.

3. θ_{JA} : Thermal Resistance-Junction to Ambient, Df: Derating factor, P_o : Power consumption

Stability Boundary Condition

Test Circuit for $V_{KA} = V_{REF}$

Test Circuit for $V_{KA} = 2V, 3V$

The areas under the curves represent conditions that may cause the device to oscillate. For $V_{KA} = 2V$ and $3V$ curves, R_2 and V_{BAT} were adjusted to establish the initial V_{KA} and $1K$ conditions with $C_L = 0$. V_{BAT} and C_L then were adjusted to determine the ranges of stability. As the graph suggested, ACE432 is unconditional stable with I_K from 0 to $100mA$ and with C_L from $0.001\mu F$ to $1\mu F$.
