

DIP-CIB

3Ø Converter + 3Ø Inverter + Brake
25 Amperes/1200 Volts

Description:

DIP-CIBs are low profile, thermally efficient, transfer mold modules. Each module consists of a three-phase diode converter section, a three-phase inverter section and a brake circuit. Open emitters allow the designer to sense the current in each phase leg for accurate and low cost current sensing. A thermistor is included in the package for sensing the base-plate temperature. 5th Generation CSTBT chips yield low loss. The module is completely Pb-Free and hence RoHS compliant.

Features:

- Compact Package
- Only 5.7mm Thick
- One Package for Entire Family
- Thermistor
- Open Emitters

Applications:

- AC Motor Control
- Servo Motors
- Robotics
- HVAC Inverters

Ordering Information:

CP25TD1-24A is a 1200 Volt, 25 Ampere DIP-CIB module.
