**Preliminary Information**

This document contains information on a new product. The parametric information, although not fully characterized, is the result of testing initial devices.

**Functional Description**

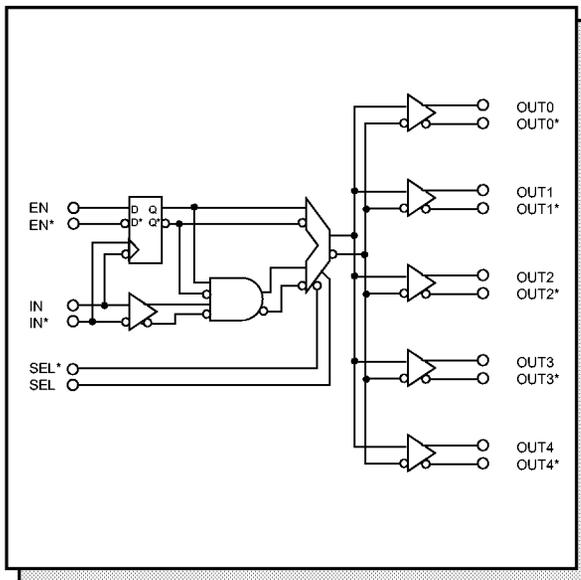

The SK1550 is an extremely fast, stable and accurate low skew 1:5 clock / signal distributor.

The SK1550 has a synchronous enable, which allows the outputs to be turned off and on without the risk of an unpredictable output pulse.

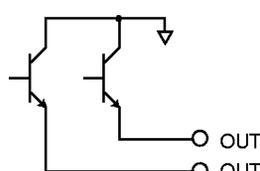

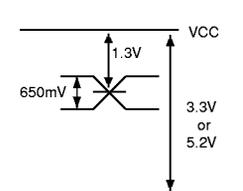

The SK1550 uses an open emitter output termination and has a 650 mV output swing. Suitable applications for this termination:

- Point to Point, or Daisy Chain
- Single or Double Terminations
- ECL and PECL compatible destinations
