**Notes:**

- (1) The device under test is mounted in a test socket and is measured at a thermal equilibrium established with a transverse air flow maintained at greater than 2.0 ms.
- (2) For the  $\mu\text{PB100474-4.5/-6}$ , take measures to reduce the thermal resistance and to keep the junction temperature less than  $90^\circ\text{C}$ . Forced air and appropriate fins on the substrate on which the package is mounted, or on the package itself, are recommended. The thermal resistance of the junction to the case (bottom side) of an LCC or flatpack package is less than  $10^\circ\text{C/W}$ .
