Notes:

1. The specified maximum capacitive load is for each output.
2. Inrush current is given for a cold start at 25°C.
3. Ripple and noise is measured with a 0.1 µF/50V MLCC and a 1 µF/50V aluminum electrolytic connected between the +Vout and -Vout pins for single output models or from each output to common for dual output models.
4. Over voltage protection is provided by a zener diode clamp.
5. Output overload protection is provided by a "hiccup mode" circuit with auto-recovery. A long-term overload could damage the unit.
6. The unit will shutdown at 90°C. It will recover automatically at about 67 °C.
7. Output short circuit protection is provided by a "hiccup mode" circuit. The unit recovers automatically when the fault condition is removed.
8. Free air (natural) convection is about 20 LFM, it is not equal to "still" air.
9. Operation at no-load will not damage these units. However, they may not meet all specifications.
10. It is recommended that an external slow blow fuse also be used on the input for protection.

Chassis Mount & DIN Rail

All models of the **MPM-24Mx** series are available in an encapsulated package that can be mounted to a chassis or cabinet and connected with flying leads. To order the unit in this package, add a "CM" to the end of the product number.

This package can also be adapted for use with a standard DIN rail by installing a simple adapter kit. As illustrated at right, this DIN rail kit consists of a base plate, a DIN rail bracket and the necessary hardware. For the **MPM-24Mx** series the DIN rail kit is: **AC-DIN-01**.
