

LUXEON 5630 Mid-Power LEDs

Illumination Portfolio

Introduction

LUXEON® 5630 delivers optimized performance in combination with quality of light needed for distributed light source applications. In addition to delivering specified correlated color temperature and color rendering combinations, these emitters deliver the efficacy and lumen output required by the indoor illumination markets. This document contains the performance data needed to design and engineer applications based on LUXEON 5630 emitters.

Key Product Attributes:

- High efficacy for sustainable design
- Widely adopted 5630 package
- Minimum 80 CRI for quality indoor lighting
- ANSI compliant 1/6th color binning

Key Applications

- Indoor Area Lighting
- Downlight
- Outdoor
- Architecture
- High bay & Low bay

General Information

Product Nomenclature

LUXEON Mid-Power emitters are tested and binned at 100 mA, with current pulse duration of 20 ms. All characteristic charts where the thermal pad is kept at constant temperature (25°C typically) are measured with current pulse duration of 20 ms.

The part number designations for the MXL8 series is explained as follows:

M X L A - B C D E - I J K L

Where:

A — designates minimum CRI performance (value 7 = 70 minimum and 8 = 80 minimum)

B — designates radiation pattern (value P = Lambertian)

C — designates color (value W = White)

D & E — designates nominal ANSI CCT (for example, 30 = 3000K and 40 = 4000K)

I, J, K & L — designates additional part numbers

Therefore products in this series with minimum CRI value of 80, CCT of 4000K will have the part numbering scheme:

M X L 8 - P W 4 0

Average Lumen Maintenance Characteristics

Lumen maintenance for solid-state lighting devices (LEDs) is typically defined in terms of the percentage of initial light output remaining after a specified period of time.

Environmental Compliance

Philips Lumileds is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON Mid-Power LEDs are compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely REACH and the RoHS directive. Philips Lumileds will not intentionally add the following restricted materials to these LEDs: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

6. In accordance with EIA-481-I-B specification.

Product Binning and Labeling

Purpose of Product Binning

In the manufacturing of semiconductor products, there is a variation of performance around the average values given in the technical data sheets. For this reason, Philips Lumileds bins the LED components for luminous flux, color and forward voltage (V_f).

Decoding Product Bin Labeling

LUXEON Mid-Power emitters are labeled using a four digit alphanumeric code (CAT code) depicting the bin values for emitters packaged on a single reel. All emitters packaged within a reel are of the same 3-variable bin combination. Using these codes, it is possible to determine optimum mixing and matching of products for consistency in a given application.

Reels of 3000K, 3500K, 4000K, 5000K, 6500K emitters are labeled with a four digit alphanumeric CAT code following the format below.

A B C D

A = Flux bin (L etc.)

B & C = Color bin (For example 51, 52, 53, 54, 55, 56)

D = V_f bin

Luminous Flux Bins

Table 7 lists the standard photometric luminous flux bins for LUXEON Mid-Power emitters (tested and binned at 100 mA). Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.

Table 7. Flux Bins

Bin Code	Minimum Photometric Flux (lm)	Maximum Photometric Flux (lm)
K	28	32
L	32	36
M	36	40

Tested and binned at 25°C, $I_f = 100$ mA. Tester tolerance +/- 7.5%.

Company Information

Philips Lumileds is a leading provider of LEDs for everyday lighting applications. The company's records for light output, efficacy and thermal management are direct results of the ongoing commitment to advancing solid-state lighting technology and enabling lighting solutions that are more environmentally friendly, help reduce CO2 emissions and reduce the need for power plant expansion. Philips Lumileds LUXEON® LEDs are enabling never before possible applications in outdoor lighting, shop lighting, home lighting, digital imaging, display and automotive lighting.

Philips Lumileds is a fully integrated supplier, producing core LED material in all three base colors, (Red, Green, Blue) and white. Philips Lumileds has R&D centers in San Jose, California and in the Netherlands, and production capabilities in San Jose, Singapore and Penang, Malaysia. Founded in 1999, Philips Lumileds is the high flux LED technology leader and is dedicated to bridging the gap between solid-state technology and the lighting world. More information about the company's LUXEON LED products and solid-state lighting technologies can be found at www.philipslumileds.com.

Philips Lumileds Lighting Company shall not be liable for any kind of loss of data or any other damages, direct, indirect or consequential, resulting from the use of the provided information and data.
